Attachments: 20171122 Upper 9-mile Plan - Mgt to EPA .pptx

Apologies about that. Please see attached.

CPG created the two presentations to outline their proposal for the upper 9-miles of the LPRSA. The file attached to my email yesterday included a more detailed technical presentation and was used to support briefings with our partner agencies and initial discussions with Contaminated Sediment Technical Advisory Group (CSTAG). The attached presentation includes many of the same slides, but includes less technical detail. The attached presentation was used to brief non-technical staff including the RA.

Jen,

I thought we were going to provide for the CAG both PPTs and the written proposal, and let them know the differences between the more-technical PPT and the less-technical PPT, no?

Attached is the CPG prepared narrative proposal for an interim remedy for the upper-9 miles and a supporting powerpoint presentation.

Quick timeline snapshot:

In early July 2017, CPG introduced the concept of their interim remedy proposal. EPA and CPG met in August, September, October and early November to work through a number of questions and comments regarding the CPG's proposal. At EPA's request, the attached narrative and powerpoint were provided in November and December to support internal and external briefings we committed to conduct in order to provide feedback to CPG about whether we support the approach of moving forward with an interim remedy for the upper-9.
